Assistant (Student)

Working Student for the Implementation of Camera Streams and Development of a Web Server

Tasks:

Implementation of live camera streams for the research project 6G-life. In addition, a web server for a GUI is to be set up in which, among other things, the camera streams are integrated.

Please note that while this work is closely related to my work, this position is from our project partners at MITI (https://web.med.tum.de/en/miti/home/).

Prerequisites

- Motivation and independent way of working
- Interest in medicine and application-oriented research
- Experience in web server development
- Ideally knowledge of camera transmission technology and GUI programming
